

Medical Assistant for Retired Individuals

Persona

Laurent Van Haverbeke

- 63 year
- Married to Denise
- 2 children
- Retired professor

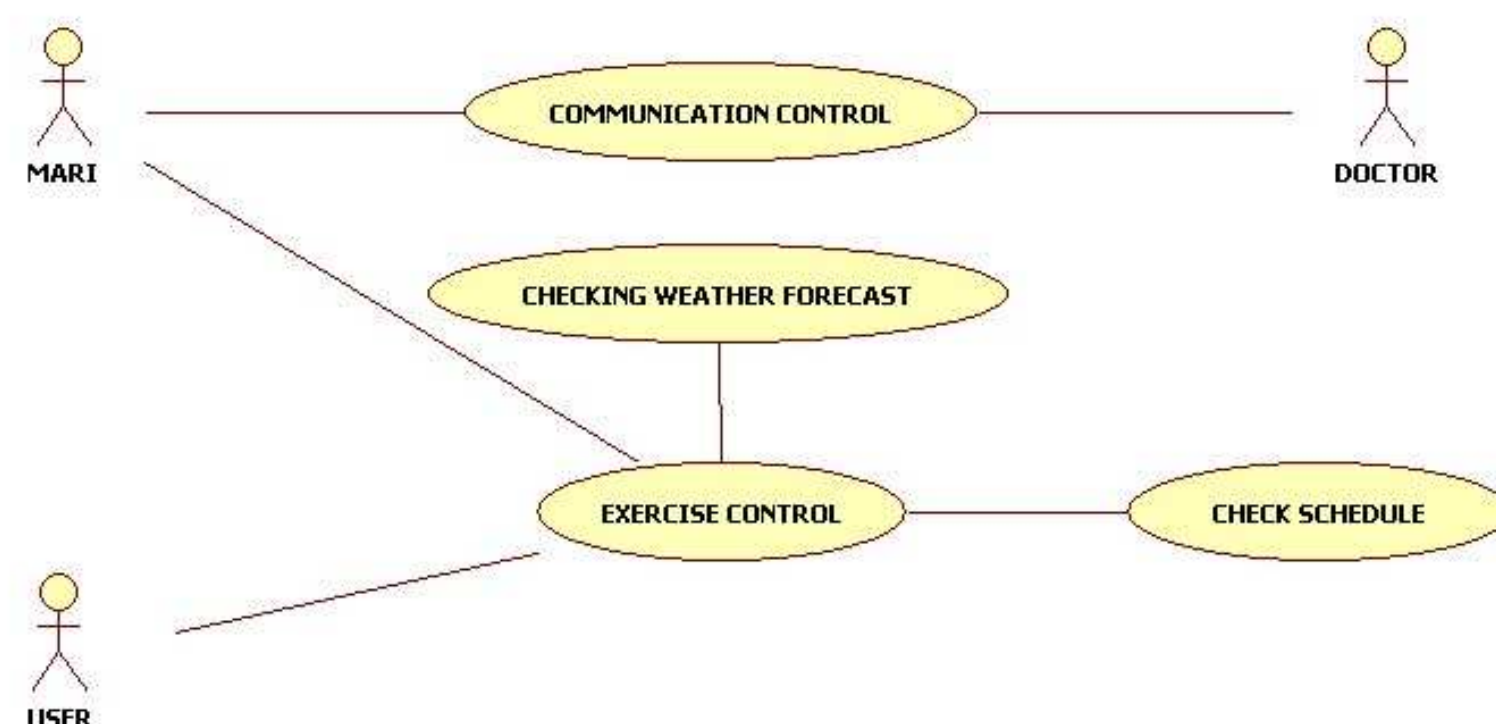

EXERCISE Scenario

- MARI checks the weather, calls Laurent's attention and suggests to him to go for a stroll.
- Laurent agrees – he needs to go shopping for dinner.
- When he returns he tells MARI how long he was gone for.
- MARI updates his exercise schedule for this week.
- Laurent gets positive feedback from MARI for taking the walk.

Exercise Use Case

EXERCISE Claim

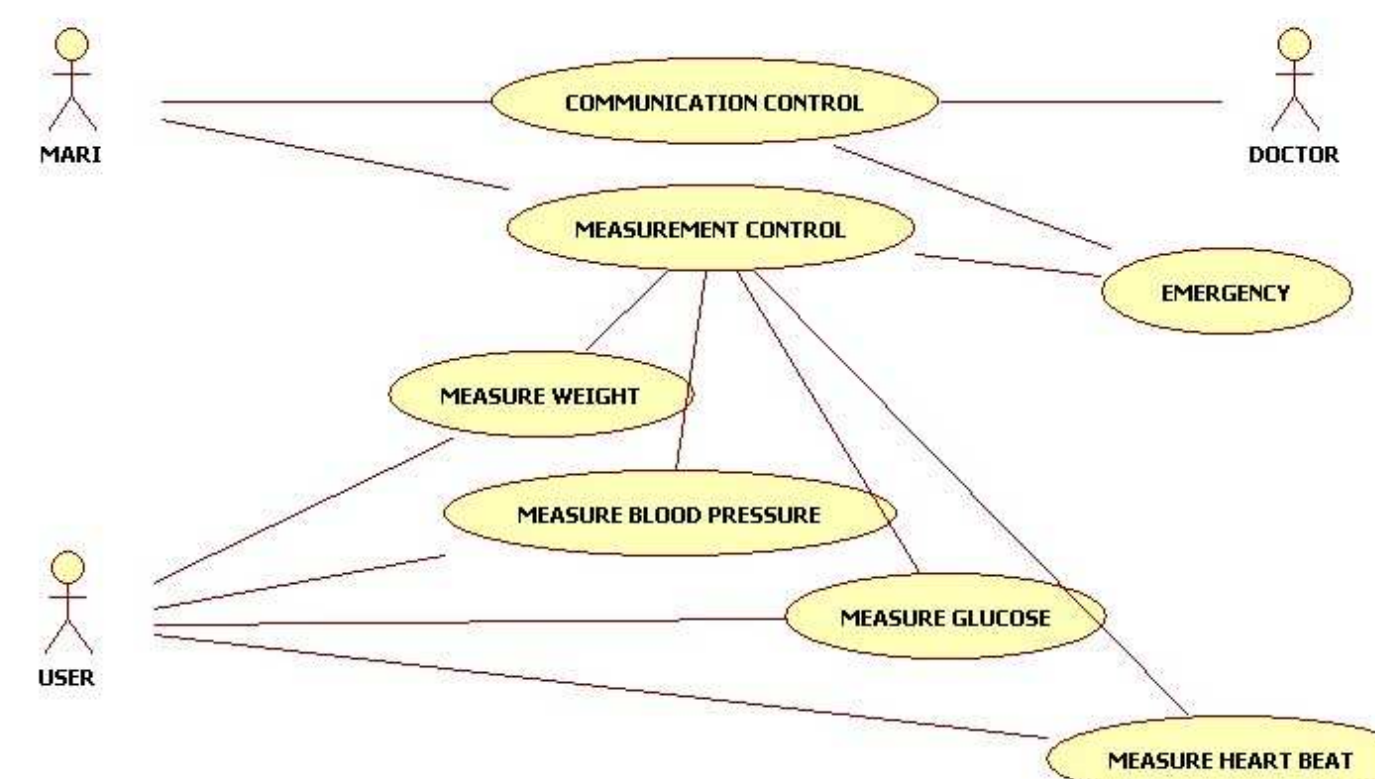

By helping and reminding users in doing daily exercises, users will be healthier.

MEASUREMENTS Scenario

- When Laurent comes back home, MARI calls his attention to measure his blood pressure.
- MARI adjusts the time for his medication according to the rules provided by the doctor.
- MARI notices Laurent's blood sugar is high.
- MARI calculates an insulin dose and gives Laurent instructions for the injection.

Measurements Use Case

MEASUREMENTS Claim

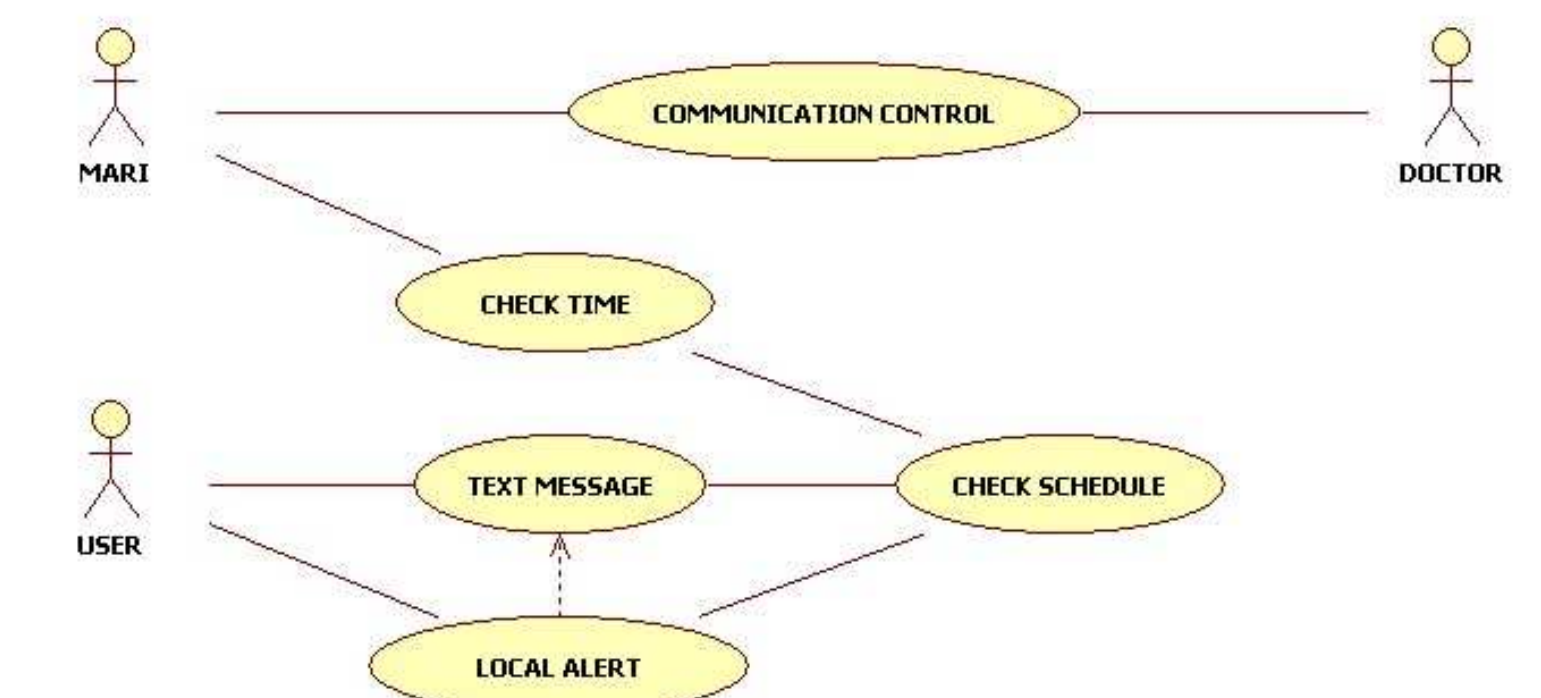

Because a doctor doesn't have to take measurements during an appointment with a patient, the focus can be more on the patient needs.

MEDICATION Scenario

- Laurent is at the doctor's for an annual check up.
- The doctor makes a change in his medication, which he then e-mails to MARI.
- MARI automatically updates Laurent's daily schedule.
- Laurent is reminded to take his medicine according to the new schedule.
- Laurent takes his medication and leaves for an appointment.
- His appointment takes longer than usual, and it's once again time for him to take his medication.
- MARI can't reach him directly so she texts him to remind him.

Medication Use Case

MEDICATION Claim

Medicines are taken more regularly.
